Overdrive/Distortion

Introducing the ARC Effects Soothsayer Overdrive/Distortion - an all encompassing take on the LM308 equipped King of Kalamazoo! At it's core is a purist friendly classic distortion with the addition of 4 clipping options (classic, boutique, open, turbo LED), internally switched high (standard) and low (overdrive) gain modes, and a Filter control implemented in reverse to respond like a traditional tone control giving you endless configurations. These features make it equally as usable for low gain overdriven tones as it is high gain distortion/fuzz tone and everything in between. Under the hood you'll find the absolute highest quality components available with no ceramic or electrolytic capacitors in the signal path, hand-wired construction, and true bypass switching for superior tone and reliability. A classic reborn!

Controls (left to right):

Volume: Controls the overall output level

CCW: Off
CW: Maximum

Filter: Controls the tone

CCW: Bass
CW: Treble

Gain: Controls the amount of gain

CCW: Minimum
CW: Maximum
